

RESTART PRO Wi-Fi

GEWISS

Choose **RESTART PRO Wi-Fi** and ensure **total safety** for your home. **With the app**, you will always know what is happening on your system.

Main features

Guaranteed continuity

In the event of untimely tripping (caused by lightning, for example), RESTART PRO reactivates the electricity supply and avoids the inconvenience of an energy failure, whether a fridge has lost power, or a burglar alarm has been deactivated.

Monitored values

Using the RESTART app, you can see the values of the voltage, current, active and reactive power, and the energy produced and consumed.

Constant control

When the residual current device is triggered because of system a fault, RESTART PRO continues to monitor the system every 2 minutes until safety conditions are restored and the circuit breaker is automatically reset.

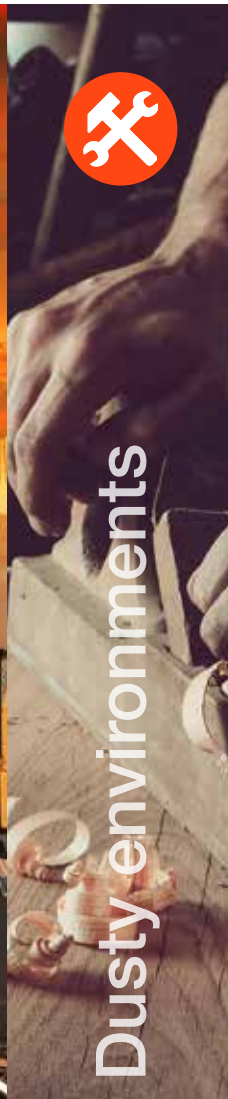

System access

Now you can keep an eye on the operating status of the system, even remotely, with the app. By fitting an additional module, RESTART PRO connects to the Internet, so you can check the status of the device at any time.
