

Senzor za prozor ZigBee
חישן חלון רשת zigbee

GWA1513

HRVATSKI

- Sigurnost uređaja jamči se samo ako se poštuju upute za sigurnost i uporabu, zato ih držite pri ruci. Osigurajte da ove upute dobiju instalater i krajnji korisnik.
- Ako prilaziti način identifikacija na uređaju koji želite upariti sa senzorom za prozor 2. Pritisnite višenamjensku tipku (A3) senzora za prozor i držite je pritisnutu oko 5 sekundi, sve dok LED lampica za programiranje (A1) ne bude treptala, zatim je otpustite.
- 3. Uverite se da LED lampica za programiranje senzora za prozor redovito trepce (svake 3 sekunde), što pokazuje fazu pretraživanja kompatibilnog uređaja; ako to nije slučaj, ponovite postupak od točke 2.
- 4. Ako se povezivanje pravilno dovrši ili ako faza pretraživanja kompatibilnog uređaja istekne (3 minute), LED lampica za programiranje prestati će treptati.

Povezivanje statusa vrata/prozora i izmjerene temperature (EZ Mode Initiator)

Da biste senzor za prozor uparili najmanje s jednim ZigBee uređajem za status vrata/prozora ili izmjerenu vrijednost temperature, morate postupiti ovako:

1. Aktivirajte način identifikacija na uređaju koji želite upariti sa senzorom za prozor
2. Pritisnite višenamjensku tipku (A3) senzora za prozor i držite je pritisnutu oko 5 sekundi, sve dok LED lampica za programiranje (A1) ne bude treptala, zatim je otpustite.
3. Uverite se da LED lampica za programiranje senzora za prozor redovito trepce (svake 3 sekunde), što pokazuje fazu pretraživanja kompatibilnog uređaja; ako to nije slučaj, ponovite postupak od točke 2.
4. Ako se povezivanje pravilno dovrši ili ako faza pretraživanja kompatibilnog uređaja istekne (3 minute), LED lampica za programiranje prestati će treptati.

ZAMJENA BATERIJE

Kad se baterije isprazne, LED lampica za programiranje (A1) dvaput će zatrepati svake minute.
Da biste zamjenili baterije, otvorite kućište uređaja pritiskom na bazu za pričvršćivanje u gornjem dijelu (slika B). Stavite nove baterije poštujući polaritet. Zatvorite kućište i provjerite radi li uređaj ispravno.

TEHNIČKA PODACI

Jedinica radio	ZigBee/IEEE 802.15.4
Frekvencija	2,4 GHz
Izlazna snaga	+3 dBm
Napajanje	Baterije: 2 x AAA (zamjenjive)
Procijenjeno trajanje baterije	maks. 9 godina
Elementi upravljanja	Višenamjenska tipka
Tip senzora	Magnetski (0,1 - 0,5 cm)
Elementi vizualnog prikaza	Crvena LED lampica za programiranje Zeleni LED lampica za signalizaciju zatvaranja vrata/prozora
Senzor temperature	Raspont: 0 do 50 °C Razlučivost: 0,1 °C (preciznost ± 0,5 °C)
Prostor	Unutarnji, suhi prostor
Radna temperatura	0 do +50 °C
Temperatura skladištenja	-20 °C do +80 °C
Relativna vlažnost	10 - 95% (nekondenzirajuća)
Stupanj zaštite	IP40
Dimenzije	Senzor: 76 x 26 x 17 mm Magnet: 30 x 12 x 9 mm
Boja	Bijela
Referentno zakonodavstvo	IEC 60669-2-1 ETSI EN 300 328
Certifikati	ZigBee

MONTAŽA

- Da biste postavili uređaj (slika C):
1. Očistite površinu sklopa.
 2. Montirajte senzor (C1) na okvir služeći se obostroboj ljepljivom trakom na njegovoj stražnjoj strani; snažno pritisnite da se učvrsti u mjestu.
 3. Montirajte magnet (C2) na vrata ili prozor na maksimalnoj udaljenosti 5 mm od sive strelice na senzoru.
 4. Nakon što ste postavili dva dijela, provjerite hoće li LED lampica za signaliziranje (A2) kratko zasvjetljiti kad se magnet približi senzoru.

Savjeti za namještanje senzora:

- Magnet se mora nalaziti uz stranu senzora označenu sivim trokutićem.
- Magnet može namjestiti pod pravim kutom na bock senzora ili paralelno s njim.
- Senzor i magnet moguće montirati u različitim trodimenzionalnim ravniama, no to će utjecati na maksimalnu dopuštenu udaljenost.
- Ako postavljate na magnetske površine (npr. metalna vrata), maksimalna udaljenost između senzora i magneta mora biti 3 mm.

NEMOJTE POSTAVLJATI senzor:

- blizu magnetskih ili elektromagnetskih polja
- blizu tvrdih diskova, magnetskih kartica, uređaja za pohranjivanje podataka, akustičnih uređaja ili zvučnika, jer bi ih magnetsko polje koje stvara magnet moglo oštetiti

FUNKCIJE

- Uredaj vrši sljedeće funkcije:
Detekcija otvaranja ili zatvaranja vrata/prozora
Ovaj uređaj detektira otvaranje i zatvaranje vrata ili prozora i šalje ZigBee radijski signal.
Senzor temperature
Uredaj ima ugrađeni senzor temperature; vrijednost temperature šalje se svake minute ako su promjene veće od 0,1 °C ili svakih 10 minuta ako se vrijednost ne mijenja.

KONFIGURACIJA MREŽE

- Pridruživanje mreži**
Može se dodati senzor za prozor (s tvorničkim postavkama) jednoj postojećoj ZigBee mreži, umetanjem baterije. On će automatski pokrenuti pretraživanje ZigBee mreže za povezivanje (maksimalno 15 minuta). Uverite se da je ZigBee mreža otvorena ("Permit Join" aktivno). Tijekom pretraživanja, LED lampica A1 zatreptati će svake sekunde. Kad se uređaj pridruži mreži, pretraga se završava i LED lampica prestaje treptati i gasi se. Ako vrijeme pretraživanja istekne, možete ga ponovno pokrenuti kratkim pritiskom na višenamjensku tipku A3.

Resetiranje na tvorničke postavke ("Factory Reset")

- U sljedećem narednom radu uređaja ili prije njegove uporabe u jednoj novoj ZigBee mreži, morate ga resetirati.
Da biste resetirali uređaj i vratile ga u tvornički stanje:
1. Otvorite kućište uređaja na bazu za pričvršćivanje u gornjem dijelu (slika B).
 2. Izvadite baterije pa ih ponovo stavite.
 3. Pritisnite višenamjensku tipku (A3) i držite je pritisnutu sve dok LED lampica za programiranje (A1) ne počne neprekidno treptati.
 4. Otpustite tipku.
 5. Nakon što se resetiranje dovrši, uređaj će pretraživati novu mrežu za povezivanje i LED lampica A1 treptati će svake sekunde.
- Uredaj se vraća na svoju tvorničku konfiguraciju brišući sva povezivanja i podatke u vezi sa ZigBee mrežom na koju je prethodno bio povezan.

KREIRANJE/BRISANJE POVEZIVANJA

Povezivanje i aplikacijske funkcije možete konfigurirati putem softvera ili lokalno, pomoći višenamjenske tipke. Detaljnije informacije o parametrima konfiguracije i o njihovim vrijednostima daju se u Tehničkom priročniku za softver ZigBee Commissioning Tool (www.gewiss.com).

Povezivanje statusa vrata/prozora i izmjerene temperature (EZ Mode Initiator)

Da biste senzor za prozor uparili najmanje s jednim ZigBee uređajem za status vrata/prozora ili izmjerenu vrijednost temperature, morate postupiti ovako:

1. Aktivirajte način identifikacija na uređaju koji želite upariti sa senzorom za prozor
2. Pritisnite višenamjensku tipku (A3) senzora za prozor i držite je pritisnutu oko 5 sekundi, sve dok LED lampica za programiranje (A1) ne bude treptala, zatim je otpustite.

3. Uverite se da LED lampica za programiranje senzora za prozor redovito trepce (svake 3 sekunde), što pokazuje fazu pretraživanja kompatibilnog uređaja; ako to nije slučaj, ponovite postupak od točke 2.
4. Ako se povezivanje pravilno dovrši ili ako faza pretraživanja kompatibilnog uređaja istekne (3 minute), LED lampica za programiranje prestati će treptati.

zigbee Commissioning Tool

Shallow mode (the specific tool for the GWA1513) is available on the GEWISS website (www.gewiss.com)
