

Wiring device system specific for installations in round and square boxes, characterized by an elegant appearance and classic shapes. The plates, realized in technopolymer in seven colors and in different modularities, from 1 up to 5 gang, are installable indifferently in horizontal or in vertical position. The range, developed around a core of monobloc devices, is available in two colors: white and ivory, in glossy finish. Expandable thanks to the Chorus modular devices.

|                                 |                        |   |  |
|---------------------------------|------------------------|---|--|
| Category                        | Push-button            | Button key  | Neutral                                |
| Colour                          | White                  | Material  | Technopolymer                          |
| Finishing                       | Glossy                 | Description   | 1P - 10A illuminable                   |
| Voltage                         | 250 V ac               | Type of terminals                                   | Screwless                              |
| Fixing                          | With clutches/Screws   | Glow wire test                                      | 850 °C                                 |
| Thermo-pressure with ball       | 125 °C                 | Resistance at test voltage                          | 2000 V at 50 Hz for 1 minute           |
| Insulation resistance           | > 5 MOhm               | Prolonged operation switch (no.of position changes) | 40.000 at In 250 V ac cosØ=0,6         |
| Terminal grip on cable traction | 30 N                   | Terminal tightening capacity                        | 0,5-2x2,5 mm <sup>2</sup> rigid cables |
| Standard                        | EN 60669-1; 2014/35/EU |   |  |
